

Putting the BIMForum LOD Specification to Work

The LOD Spec

- What is it?
- How do you use it?
- Why would you want to?

The BIMForum LOD Spec has been recognized as an extremely useful document for defining BIMs. But where does the rubber meet the road? How can this document benefit your projects?

Whether you're an owner, architect, engineer, GC, or trade contractor, if you're dealing with BIMs you're using them for specific purposes with specific information needs. How do you clearly communicate these needs to make sure you're sending and receiving the required information? How do you avoid over- and under-modeling and redundant effort, all of which waste time and money? How do you control the risks of others relying on your BIMs? How do you create and follow a lean BIM execution plan?

In this highly interactive full-day workshop you'll learn how to translate the LOD Spec into more efficient workflows, clearer communications, less waste, and a more effective modeling effort.

Agenda

- What is Level of Development?
- The Model Development Spec (MDS)
- Exercise – Develop a Baseline MDS
- The MDS in BIM Execution Plans
- Pull Planning
- Exercise – Collaborative Work Plan
- Exercise – Defining Deliverables
- Fitness of Models
- Exercise – Reliance on Models
- Risk Mitigation
- Agreements
- MDS Tools
